DETAILED ACTION

1. Claims 1-26 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 16-20 and 22-34 of U.S. Patent No. 6,682,215. Although the conflicting claims are not identical, they are not patentably distinct from each other because the synthetic fibers claimed in the patent are generic to and obviously read on the presently claimed aramid fibers and aramid fibril.

2. Claims 22-26 rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Ramachandran et al (5,833,807).

Ramachandran et al discloses uniform sheet of aramid fibers and fibrils. The fibers are agitated in the aqueous dispersion at a pH of greater than 10 to disperse the aramid fibers uniformly into individual fibers in order to form a uniform sheet. Although Ramachandran et al does not use the device used in the presently claimed method, the product is nevertheless uniform. As such, the present final product which is claimed as a product by process claim, is not patentably different from the Ramachandran et al product. It is inherent that that the simple pouring of the fiber slurry in hand sheet former in Ramachandran et al produces a random orientation of the fibers. Thus, Ramachandran et al anticipates or obviously shows the claimed product.

Re: claims 23 and 24, the amounts have no lower limit and thus reads on zero percent. In any case, the last example in column 7 of Ramachandran et al shows aramid floc fibers and 0.544% aramid fibril.
